CLAUDE CORPS · FELLOW PROJECT PACKET

Black Hills Works Inc

AI Department Embedding and Assistive Technology Matching Agent

---

This is your starting point for the project you've been matched to. It comes from what your host told us, so expect parts of it to shift once you're there and asking questions.

1. YOUR HOST

Who they are

Black Hills Works (BHWS) is a provider of services for adults with intellectual and developmental disabilities (IDD) in Rapid City, South Dakota. It was founded in 1958 by parents who refused to institutionalize their children. About 700 staff work across six impact zones: workforce development, transportation, home life, arts expression, community life and specialty services.

Who they serve

Roughly 600 adults with intellectual and developmental disabilities. Homes and offices are spread across Rapid City neighborhoods on purpose, so the people BHWS supports are part of their community instead of gathered on one campus.

Where they are with AI

Structured and governed, but uneven. Claude Enterprise is deployed with one readable AI policy and mandatory training before anyone gets a license. Some departments use it deeply and others rarely touch it.

- Billing uses custom Claude skills built around its Therap and electronic health record workflows.
- Security and compliance run vendor risk evaluations, threat hunting and incident investigation as recurring Claude skills.
- Residential and program services analyze data trends at scale, and finance uses analysis workflows for forecasting.
- What works: departments where someone sat inside the workflow built real momentum. Training reached 100% completion before any license went out.
- What's hard: where nobody embedded, licensed staff use Claude like a search engine twice a month.

---

2. THE PROJECT

The short version

You'll embed in Black Hills Works departments to find and build the AI workflows their one AI lead can't reach alone, and help test and harden an agent that matches adults with IDD to assistive and augmentative technologies.

Why it matters

Systems in this field were built for regulators and professionals, not for the people at the center of them. BHWS wants AI to make information accessible to the person it's about, amplifying voices without replacing them. And, in their words, “what we build often gets shared” with other providers.

YOUR PROJECT

AI Department Embedding and Assistive Technology Matching Agent

THE PROBLEM

One person leads AI while holding three other senior roles, so nobody has time to sit inside each department long enough to find and build the right workflows. Separately, the assistive technology matching agent built with Anthropic through the Lighthouse Program needs accuracy testing, feature expansion and security hardening before production.

HOW IT WORKS TODAY

The AI lead schedules meetings with department leaders, sits inside their workflows to find use cases, then builds, tests and deploys Claude skills himself. Everything waits on his availability. The matching agent's build phase is complete. At the time of their intake interview, testing had not yet started.

WHO YOU'RE HELPING

The Director of Information Security and AI, department leaders and staff across the six impact zones, and the BHWS and Anthropic teams testing the matching agent. Ultimately, the adults BHWS supports.

WHAT'S BEEN TRIED

The AI lead embedded in select departments himself and built Claude skills, for example in Billing. Interns helped some, but lacked the field context to work independently.

WHAT SUCCESS LOOKS LIKE

Within a year, at least one tool in production that a person BHWS supports touches directly. Measurable results for each department rotation, such as time saved. A method other providers can adopt. An agent that passes accuracy testing and security hardening before deployment.

NOT IN SCOPE

Tools that make decisions about a person's supports or restrictions: AI surfaces patterns, humans decide what they mean. Replacing human support where the human support is the support.

3. WHO TO CONTACT

Your supervisor	Tyler Wainwright Director of Information Security & AI
Executive sponsor	Mary Duncan CFO

Prepared by the Claude Corps team from Black Hills Works Inc's application and intake interview. Quotations are your host's own words; everything else is our summary of what they told us.
